

Employment Trends Analysis in Great Britain

(2011–2014)

Objective

The objective of this project is to analyze employment trends across different industries and cities in Great Britain between 2011 and 2014 using Microsoft Power BI. The dashboard provides insights into employment distribution, industry growth, city-wise employment changes, and comparisons between 2011 and 2014.

Tools Used

- Microsoft Power BI Desktop
- Microsoft Excel
- Data Visualization
- Data Cleaning using Power Query

Dataset

Dataset Name:

Employment Data (Great Britain 2011–2014)

Source:

Excel Dataset provided by iNeuBytes Internship

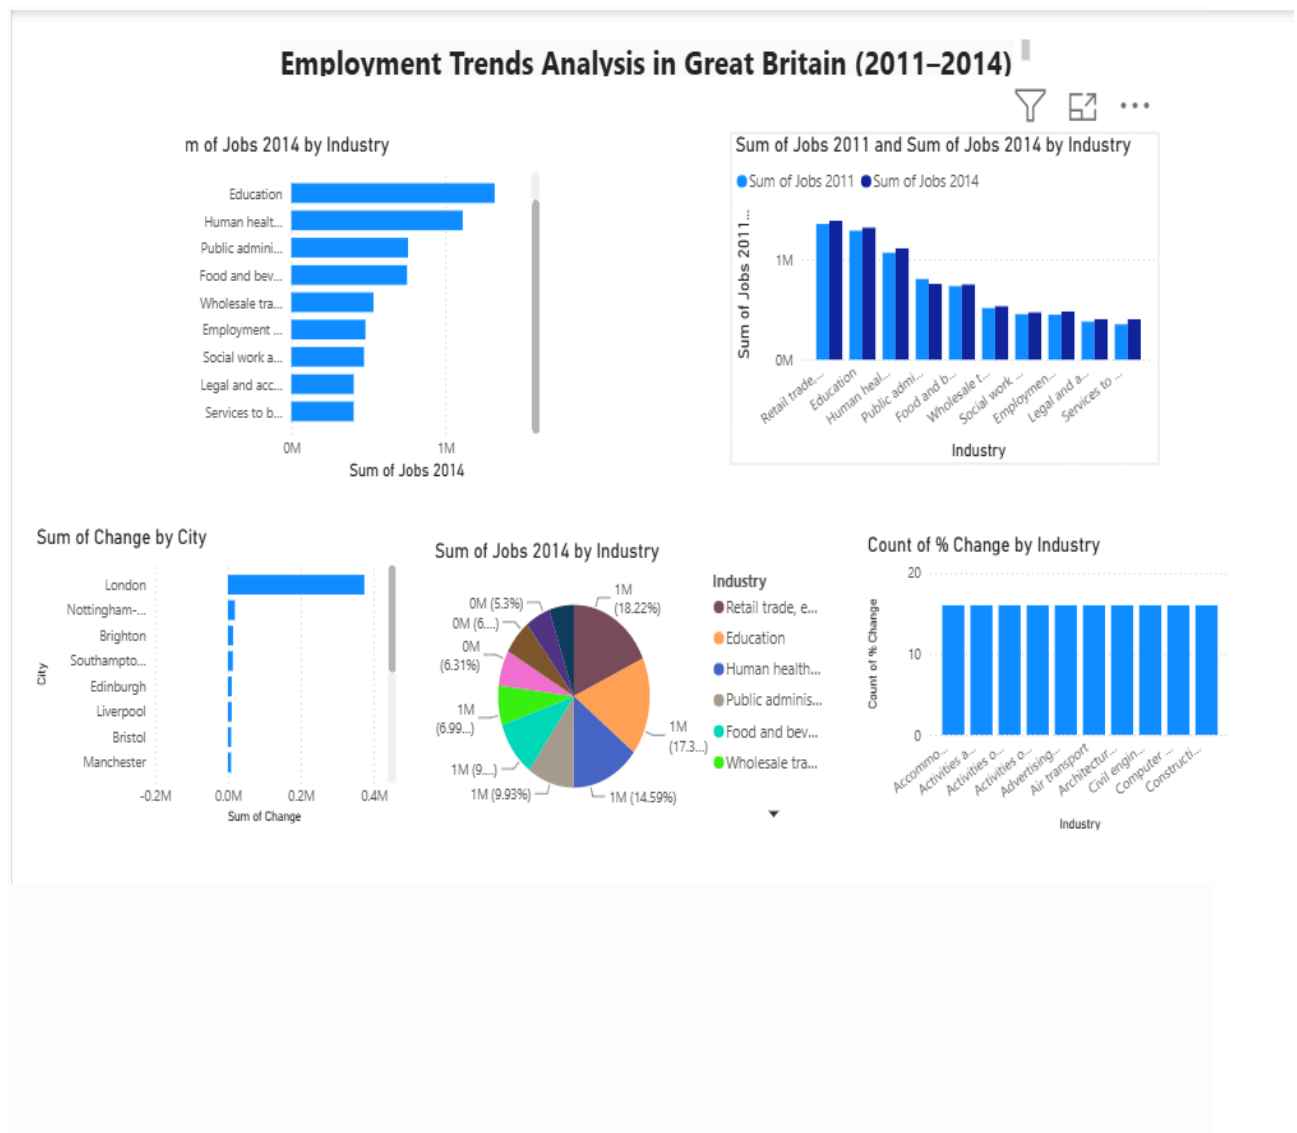

Dashboard Visualizations

1. Top 10 Industries by Employment (2014)
2. Employment Comparison (2011 vs 2014)
3. Top 10 Cities by Employment Growth
4. Employment Distribution by Industry

5. Top 10 Industries by Growth Rate (%)

Key Insights

- Education and Retail sectors have the highest employment.
- Employment increased in several industries between 2011 and 2014.
- London recorded the highest employment growth.
- Growth rates vary significantly across industries.
- The dashboard helps identify employment trends and sector performance

Conclusion

This dashboard successfully visualizes employment trends across industries and cities in Great Britain. It enables users to compare employment data across years, identify leading industries, and analyze regional employment growth using interactive Power BI visualizations.
